sustainability

PERMIT REF: EPR/HP3403BL

About Us

Dunton operates this permitted waste treatment facility. The facility provides a sustainable alternative to landfill through the treatment, recovery and recycling of **hazardous waste** materials. Permitted waste streams include:

- Soils and waste containing identifiable pieces of bonded asbestos
- Hydrocarbon-contaminated soils
- Construction and demolition wastes
- Oil/water separator residues
- Hazardous wastes from waste management facilities
- Soil remediation wastes
- Track ballast containing hazardous substances
- Dredging spoil containing hazardous substances

Permitted Activities

The facility is authorised to undertake:

- Biological treatment (bioremediation) of hazardous contaminated soils
- Recovery of asbestos-impacted soils through manual asbestos picking
- Temporary storage of hazardous waste pending treatment
- Recovery and recycling of treated soils for beneficial reuse

Environmental Benefits

Our treatment technologies provide significant environmental and commercial benefits:

- Sustainable alternative to landfill disposal
- Recovery of hazardous wastes for beneficial reuse
- Reduced disposal costs
- Reduced carbon footprint compared with landfill
- Minimised project delays
- Supports circular economy objectives
